CHIKA chan WEBSITE		
Service	**Explanation**	**Time**
Website Design	This is the initial step, I usually create a blueprint of the website either digital or in paper to have an idea of what I want to create, the layout and the features to be added.	1-2 hours
Website Development	This is the coding part, I take the blueprint and use code to create the website.	15-20 hours (for the first draft)
Domain and Hosting	Domain is the address, like chikahula.com, you usually need to pay for this domains unless your website is just for a test. The hosting part is the maintainance and storage of a website in a server so it can be reach by others.	Not Applicable
Website Maintainance	This part is after the website is up and running. I will fix any errors, make any new changes, improve the website and keep it running.	2-3 hours per month (but depends)

The above services I want to provide for your website, but depending on how everything goes and what you want in the future, I'd like to keep working in the website to develop future features and expand it. Like:

E-commerce	Maybe, at some point, we can add an e-commerce option in the website, meaning that you could sell chika hula shirts, hula necklaces, toka.	N/A
Online Reservation	Like we use in TAC, we can implement like a Table Solution feature in your website to make reservations for hula classes	N/A
SEO	Search Engine Optimization (SEO) is a process that wants to improve the ranking on a website in a search engine like google. For example, if someone types "hula near me" in google, with good SEO, your website might appear at one of the top positions.	N/A

I want to provide the design and development for free since it's Chika chan and I'm gonna have a lot of fun making the website. Nervetheless, I have to pay for the hosting and domain name, for small websites that's not mcuh, and some hosting services provide free domain names for the first year. I would like to charge something for the monthly maintainance of the website since I might be working at least 2 hours per month on it. If at some point you want to include more features then we can discuss the money. So this is my proposal:

Up-front cost	**Monthly maintenance**
¥0	¥1,000
